

OFFSHORE WINDFARM DEVELOPMENT

During next decades, wind energy will gradually gain in importance and will become one of the major sources of renewable energy.

By combining the specialised know-how of its shareholders, Power@sea has the ambition to become one of the major players in this rapidly expanding market of renewable energy by developing large offshore wind farms.

The complexities of wind farm project development at sea requires a unique pool of multidisciplinary expertise from companies who can rely on experience in project development, complete marine project management, electricity distribution and the financing of huge environmental investments.

Mission statement

Power@sea intends to become one of the leading companies in the production of renewable energy by means of the development of large offshore wind farms. Power@sea provides complete solutions going from project development and financing, over project realization towards long term offshore maintenance in order to guarantee sustainable production of green electricity.
